

ANTI SPATTER

- ✓ Prolongs nozzle life
- ✓ Prevents spatter adhesion
- ✓ Biodegradeable
- ✓ Non Flammable
- ✓ Non Aerosol
- ✓ Water based
- ✓ No harmful fumes when welding

PRE-WELDING SPRAY TO PREVENT SPATTER ADHESION

Cyndan Anti Spatter is ideal for all types of welding. It has been proven to protect surrounding metal from molten metal spatter during the welding process. It is also used for preventing the welding tip nozzle from clogging. (eg; mig welders)

Anti Spatter is non flammable and contains no petroleum solvents, no offensive odour or fumes. It is safe to the skin and It does not leave petroleum odour residue on hands.

Anti Spatter is biodegradeable and does not need to be rinsed clean prior to painting the welded surface, thus saving time and resources.

Anti Spatter dilutes with 5 parts water costing a fraction of the cost of aerosols. At least 10 cans are required to duplicate the result of 1 litre of Cyndan Anti Spatter. It also prolongs the life of the welding nozzle beyond normal expectancy.

SIZE:

1L, 5L, 25L, 205L

Independently tested by a registered N.A.T.A. (National Association of Testing Authorities) Laboratory and has been found to surpass the following Australian standards:
