

CHEMICAL TOILET ADDITIVE

- ✓ Ensures thorough sanitisation
- ✓ Controls odour for up to 2 weeks
- ✓ Control a variety of pathogens
- ✓ Destroys bacteria, fungi & viruses
- ✓ Blue dyed version available

PORTABLE TOILET DEODORISER AND DISINFECTANT

Cyndan Chemical Toilet Additive (CTA) is a clear coloured super concentrate that provides odour control in portable toilets for up to 2 weeks and is also active against a wide range of bacterial types.

CTA has been formulated to provide a broad spectrum control over a variety of pathogens. The two biological active components, Glutaraldehyde and Benzalkonium Chloride, are each active against a range of bacterial types.

The advantages of two active constituents is that where Glutaraldehyde destroys certain bacteria, fungi and viruses, Benzalkonium Chloride targets others ensuring thorough sanitising.

After the regular emptying of the Chemical Toilet, the appropriate amount of CTA should be added to the empty toilet. The general cleansing of the toilet should then take place with Cyndan **Power Kleen** or Cyndan **Cleans All**.

General disinfection of the cabinet area is advised. This should ideally be completed using Cyndan **Dual 100 Powder Puff** as this product's perfume best compliments that of CTA.

CTA comes in two versions, dyed (blue) and undyed (clear). As the dye has no active role in the treatment of the water, it is not necessary, however the advantage of dye is that it adds to the aesthetics of the product and waste. Care should be taken if using the dyed version as it does stain.

SIZE:

5L, 25L, 205L

IDEAL FOR:

- Chemical Toilets

Chemical solutions across multiple industries
