

CRANK

- ✓ Nano coating technology for your vehicle
- ✓ Year long protection
- ✓ Easy to apply solution

CYNDAN REVOLUTIONARY AUTOMOTIVE NANOCOATING KIT (CRANK)

CRANK is the ultimate protective vehicle treatment using revolutionary new Nano Coating technology. **CRANK** has been designed to exceed all other forms of coating protection for your car, motorbike, truck or van. **CRANK** is used to coat everything on the outside of your vehicle for year long protection.

CRANK offers an easy to apply pre-wash followed by an aerosol solution to protect the body, windscreen, windows and wheels (excludes tyres). Just use our pre-cleaning solution to wash the vehicle as normal. Once dried, spray the **CRANK** Aerosol can over sections of the vehicle and buff as you go on a panel by panel basis. Keep vehicle dry for at least 6hrs for the **CRANK** to set. Once **CRANK** applied, the treated surface should only ever be rinsed with water or cleaned using a PH neutral cleaner. Using any other cleaning product or going through a carwash will damage the treated surface and require a re-application of **CRANK**.

Your vehicle will then look and operate better than ever. **CRANK** will protect the vehicles exterior for up to 12 months and water simply beads off the vehicle every time it rains. Nothing can stick to **CRANK** like it does on normal duco and glass. **CRANK** also ensures brake dust on the rims can be just washed off with a hose. Don't pay \$100 per month for regular car wash facilities when for less than that you can apply **CRANK** which will keep your vehicle looking great all year round.

KIT INCLUDES:
