

DISLODGE

- ✓ Degreasing additive
- ✓ Increases flashpoint of most solvents making them safer
- ✓ Non Flammable
- ✓ No Caustics or acids
- ✓ Safe to use

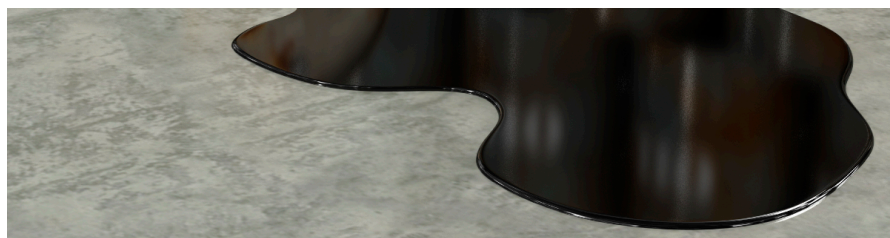

HIGH FLASH POINT DEGREASING ADDITIVE

Cyndan **Dislodge** is a degreaser additive. It is a concentrate which is designed to be added to present degreasing fluids. It contains no caustics, acids or creosote materials making **Dislodge** safe to the skin and low in odour. **Dislodge** is not classed as a flammable liquid as it has a high flash point greater than 61°C.

When added, **Dislodge**:

- Increases the flashpoint of most solvents, thus increasing it's safety.
- Chemically changes the make up of present solvents making them emulsify in water, thus improving rinsing and cleaning.
- Increases the penetration of current solvents which results in a more thorough cleansing and a surface free of oily residues.

Safety: **Dislodge** creates a new level of safety when working with hot machinery. As an additive, **Dislodge** can be added to any hydrocarbon solvent such as kerosene. When blended with other solvents **Dislodge** forms an economical solution for all degreasing applications.

SIZE:

1L, 5L, 25L, 205L

AQIS approved Category 3, general cleaner type C

USE FOR:

- Safety solvent based degreasing
- Removing pre-delivery wax
- Parts washing
- Cleaning workshop floors
