

FABRIC FIRE PROOFING

- ✓ Water based solution
- ✓ In-situ treatment for curtains, carpets and soft upholstery materials
- ✓ Does not make fabric stiff
- ✓ Dries clear

CHEMICAL FIRE RETARDANT SPRAY TREATMENT FOR FABRIC

Cyndan Fabric Fire Proofing is a water based solution for the treatment of fabric. It is intended for in-situ treatment of curtains, carpets and soft upholstery materials. Natural fibres and mixtures of natural and syntehtic fibres can usually be satisfactorily treated.

Natural fabrics are generally acceptable for treatment. These include cotton, sea grass matting, velvet and carpet.

Fabric Fire Proofing is supplied as a ready to use product. Apply by airless sprayer for best results. Coverage rate depends upon fabric being treated. Normally 1 litre of solution is needed for every kg of material. As a guide 5m²/L on 140gm/m² cotton to 1m²/ L on 3.2kg/m² carpet.

Fabric Fire Proofing is resistant to dry cleaning. After washing however retreatment is necessary. Carpets should be cleaned and retreated after 9-12 months. Other materials need retreating every 2-3 years to maintain effectiveness.
