

# THEY'RE EVERYWHERE

The hottest October on record has caused flies to hatch in huge numbers in paddocks on the urban fringe, and the prevailing winds have blown waves of them into the city to feed – on us. But scientists say there is a savior.

## Cafe Culture Keeps Councils on the Ball

Experts are busy ensuring food outlets don't pose a risk!

*Keeping food safe is a passion for environmental health co-ordinator Fonti. His team has helped develop an approach to assessing new food businesses with the increasing regulatory compliance.*

*"We want to make sure proprietors know what they are doing and that the food they serve is safe".*

All food businesses are required to take all practicable means to prevent insects and other pests from entering premises wherever food is stored, prepared and/or served to customers.

Not only do flies and other insects carry parasites, bacteria and disease, they are also a source of considerable discomfort to customers.
