

METAL PROTECTIVE COATING

- ✓ Prevents corrosion and prolongs life
- ✓ Once applied, the solvent evaporates leaving the protective coating
- ✓ Not sticky to touch when cured
- ✓ For indoor and outdoor application

IRON, COPPER, ALUMINIUM AND STAINLESS STEEL ANTI CORROSION TREATMENT

Cyndan Metal Protective Coating prevents corrosion and prolongs the life of tools, instruments, jigs, parts in storage, structural metal beams, piers and railings. It seals out weather and moisture.

A permanent coating for the treatment of metals for indoor and outdoor applications. **Metal Protective Coating** can be used for the permanent protection of all metals against corrosive elements.

Metal Protective Coating is a solvent deposited coating. This means that once applied, the solvent evaporates, leaving the protective coating. Unlike many permanent coatings, **Metal Protective Coating** can be removed by a rubbing action in conjunction with a solvent degreaser, such as **Cyndan Dislodge**.

When cured the **Metal Protective Coating** is not sticky to touch. This makes the product ideal for cables, equipment and tools that need to be handled after the application.

SIZE:

1L, 5L, 25L, 205L

IDEAL FOR:

- Extremely corrosive environments: off shore oil platforms, industrial plants, marine applications, etc.
- Cables, instruments, tools, piers, jigs, railings, equipment, parts in storage, structural metal beams, etc.
- Manhole covers and drainage grates.
