

MOLY PLUS

- ✓ Molybdenum disulfide based lubricant
- ✓ For corrosion, rust and moisture protection
- ✓ Preserves friction points
- ✓ Reduces sticking problems
- ✓ Withstands heavy pressures and extreme temperatures, up to 315°C

MULTI-PURPOSE HIGH TEMPERATURE AND PRESSURE LUBRICANT

Cyndan Moly Plus is a multipurpose lubricant that forms a thin, dry black film, adhering to surfaces for long lasting lubrication under extreme pressure and high temperatures.

Protects surfaces from corrosion, moisture and rust. Resists abrasives, dust and sand. Withstands most acids, alkalis, oils and water. Penetrates and frees frozen surfaces. Preserves friction points. Reduces sticking problems. Effective for temperatures up to 315°C.

Typical applications include use for thread anti-seize and press fit problems, plus engine assembly and run-in lubrication, maintenance lubrication, automotive and industrial gasket coating, stop off plating coatings and rubber mould release compounds.

All chain driven equipment, plant or machinery can also be dry lubricated with Moly Plus. Results from this dry lubrication are that contamination from the environment is not transferred to the drive chain. This normal transfer of contaminants mixed with lubrication grease produces a grinding paste which causes mechanical problems. This abrasive wear is avoided by applying dry lubrication using Cyndan Moly Plus.

SIZE:

350g CAN

IDEAL FOR:

- Road sweeping vehicles
- Lawn care machinery
- Playground equipment
- Piping fixtures & threads
- Door lock lubrication
- Bicycle repairs
