

SPA BATH TREATMENT

- ✓ Cleaning and sanitising of refillable spa-baths
- ✓ Non corrosive
- ✓ Non toxic
- ✓ Non irritating
- ✓ Kills Staphylococcus aureus & E. Coli

BATH AND SPA CLEANING CHEMICAL SOLUTION

Cyndan Spa-Bath Treatment has been researched and developed for the cleaning and sanitising of refillable spa-baths commonly used in hotels, motels, resorts, gymnasiums, clubs and even the home.

Water is an ideal medium in which germs can multiply and flourish. This is especially true and is made worse in warm water as is found in spa baths. Spa baths which are not attached to a filtering or chlorinating system such as home spas are a constant source of contamination. **Spa Bath Treatment** is proven to kill unwanted organisms such as staphylococcus aureus and E.Coli.

The cleansing and sanitising action of **Spa Bath Treatment** is required due to the fact that water residues remain in the pumping mechanism and are injected into the bath the next time it is used. This is a source of cross contamination of the water and is very unhygienic if not treated.

As a minimum, the process should be carried out monthly if the spa has been used.

SIZE:

5L, 15L, 25L, 205L, 1000L

TGA certified as a
commercial disinfectant
option C

DIRECTIONS FOR USE:

- Fill the spa to a level just above the jets. If possible, turn off air blower
- Add 1L of Spa Bath Treatment for every 75L of bath capacity
- Allow the treatment to circulate for 3-5 minutes
- Empty bath and clean in the normal manner
- The process should be carried out monthly if the spa has been used
